Digital Literacy Project Report

Name – Shreem Bhargava

Registration Number – 25MIMI10011

Branch – Integrated Mtech (Artificial Intelligence)

Year – First Year

Couse Code – CSE0001

Course – Digital Literacy

Date – 27 March 2026

Introduction:

This project was assigned as part of the Digital Literacy course to develop essential digital skills required in today's academic and professional environment. As a Student Digital Ambassador, the objective was to create awareness about digital tools, online safety, and professional communication.

The project consists of five tasks, including creating an infographic, building a digital portfolio, exploring coding and collaboration platforms, understanding email etiquette, and studying cybercrime awareness. Each task helped in gaining practical knowledge of various digital tools and platforms.

Through this project, I learned how to effectively use online platforms, maintain a professional digital presence, and communicate responsibly in the digital world.

Task 1:

In Task 1, I created a digital literacy awareness infographic using Canvas. The infographic focused on key topics such as the importance of digital literacy, safe internet practices, and useful digital tools for students.

The design included simple visuals, icons, and short text to make the information easy to understand. I aimed to make it visually attractive and informative so that it could be useful for my peers.

While creating the infographic, I found it interesting to explore different templates and design elements in Canvas. One challenge I faced was selecting the right content and organizing it in a clear and concise manner. This task helped me improve my creativity and presentation skills.

Task 2:

In Task 2, I created and updated my profiles on platforms like GitHub, Kaggle and LinkedIn to build a professional digital portfolio. GitHub is used to store and manage projects, while LinkedIn is useful for networking and showcasing professional achievements.

I added my educational details, skills, and a short bio to make my profiles complete and professional. This task helped me understand the importance of maintaining an online presence.

In the future, I plan to regularly update these profiles with my projects, achievements, and skills. This will help me during internships and job placements. Overall, this task was useful in understanding how digital platforms contribute to career growth.

Task 3:

In Task 3, I explored coding and collaboration platforms. I used HackerRank to solve a beginner-level coding problem, which helped me understand basic programming concepts and improve my problem-solving skills.

Additionally, I created a Google Form to design a digital literacy awareness quiz. The form included multiple-choice and short-answer questions, making it interactive and informative.

This task helped me understand how online platforms can be used for learning and collaboration. Coding platforms help in improving technical skills, while tools like Google Forms are useful for collecting information and conducting surveys.

Task 4:

In Task 4, I learned about professional email writing and digital communication etiquette. I drafted two emails — one to a professor requesting an extension and another to an internship coordinator.

I also created a checklist of do's and don'ts for social media usage. This task helped me understand how important it is to communicate clearly and respectfully in a professional environment.

Poor communication can lead to misunderstandings and missed opportunities. By following proper email etiquette, such issues can be avoided. This task improved my communication skills and awareness of digital behaviour.

Task 5:

In Task 5, I studied cybercrime awareness by creating a case study and a prevention checklist. I learned about different types of cybercrimes such as phishing and online fraud.

One thing that surprised me was how easily people can become victims of cybercrime due to lack of awareness. I also learned about preventive measures like not sharing personal information and using secure passwords.

As a result, I will be more cautious while using the internet and will follow safe online practices. This task increased my awareness about digital safety.

Conclusion:

Overall, this project was very informative and helped me develop essential digital skills. I learned how to use various online tools, create professional profiles, and communicate effectively.

The project also increased my awareness of cyber safety and responsible internet usage. These skills will be useful in my academic journey as well as in my future career. I will continue to apply what I have learned in this project.
